Cargo Visibility API

COMING SOON

Enjoy superior tracking capabilities, delivering high-quality, timely updates for your ocean and air shipments.

Designed for seamless integration and maximum efficiency, our new API enables you to subscribe to and receive tracking events outside of CargoWise. With data sourced directly from carriers, ports, terminals, and live positional feeds, the API offers exceptional accuracy and coverage.

Patented algorithms and AI validation ensure every event is reliable and timely, giving you the confidence to make data-driven decisions and streamline your operations.

Global carrier coverage

Access tracking events from a vast network of hundreds of ocean carriers, NVOCCs, airlines, and additional data from ports and terminals worldwide. This extensive coverage provides you with comprehensive visibility, ensuring you stay informed about your shipments.
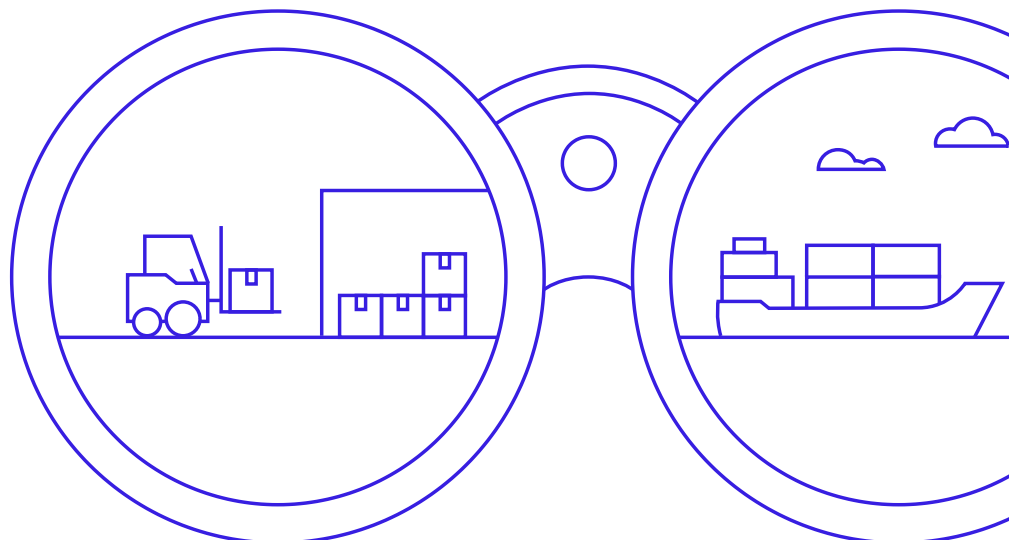

Timely, accurate updates

Receive validated tracking events sourced from carriers, terminals, and live positional data. By using advanced algorithms and multiple data sources and geofences, the API ensures that every update is highly accurate, enabling you to track shipments with precision.

Seamless integration

Utilizing a Universal Event XML format, the API ensures seamless integration with your existing systems. This format simplifies the connection process, allowing for smoother data flow and minimal disruption to your operations.

Unlock **unparalleled supply chain visibility** with precise tracking and seamless integration, empowering your operations to stay ahead of every shipment.

CARGOWISE NEXT

Push event notifications

Tracking updates are delivered instantly via HTTP Webhooks, ensuring timely and relevant notifications as soon as new events occur. This approach reduces delays and improves overall responsiveness to supply chain changes.

Validated vessel and flight data

Near real-time tracking events are verified using patented algorithms and multiple data sources, including AIS for vessels and avionics systems for flights. This validation process ensures the highest level of accuracy for every update you receive.

Extensive carrier network

The API covers a wide range of ocean carriers, airlines, and additional data from ports and terminals, giving you comprehensive visibility. This global coverage ensures you can track shipments from any part of the world with confidence.

AI-enhanced accuracy

Each tracking event is rigorously assessed by artificial intelligence and complex algorithms, cross-referencing multiple sources and geofences to guarantee data accuracy. This process reduces the chances of errors and provides you with reliable, near real-time information.

Low latency delivery

With exceptionally low latency, tracking events are delivered almost immediately after they are published. This ensures minimal lag between the event occurrence and the information reaching your system, allowing for quicker decision-making.

Regular vessel location updates

Receive consistent and precise updates on the exact location of vessels through the LOC event, with live tracking of your vessel movements. This feature ensures that you always know the position of your shipments, improving planning and visibility.
