

Electronic Master Bill of Lading

Accelerate data exchange while increasing data security and transparency.

Our integration with Bolero (a WiseTech Global company) allows you to receive, view, and transfer Electronic Master Bills of Lading (eMBL) directly from the Forwarding consolidation in CargoWise.

Once the eMBL is published by an ocean carrier, the document – including title registry details – is made available in CargoWise. This enables users to view the document, check its current holder, transfer the title, and request the carrier to amend or surrender the bill, ensuring the security and authenticity of the original document.

Transform your trade documentation process

Electronically request, receive, and manage ocean bills of lading, eliminating delays caused by traditional paper-based processes. By digitizing document handling, you streamline shipments, ensuring faster processing times and greater overall efficiency.

Reduce costs and minimize fraud

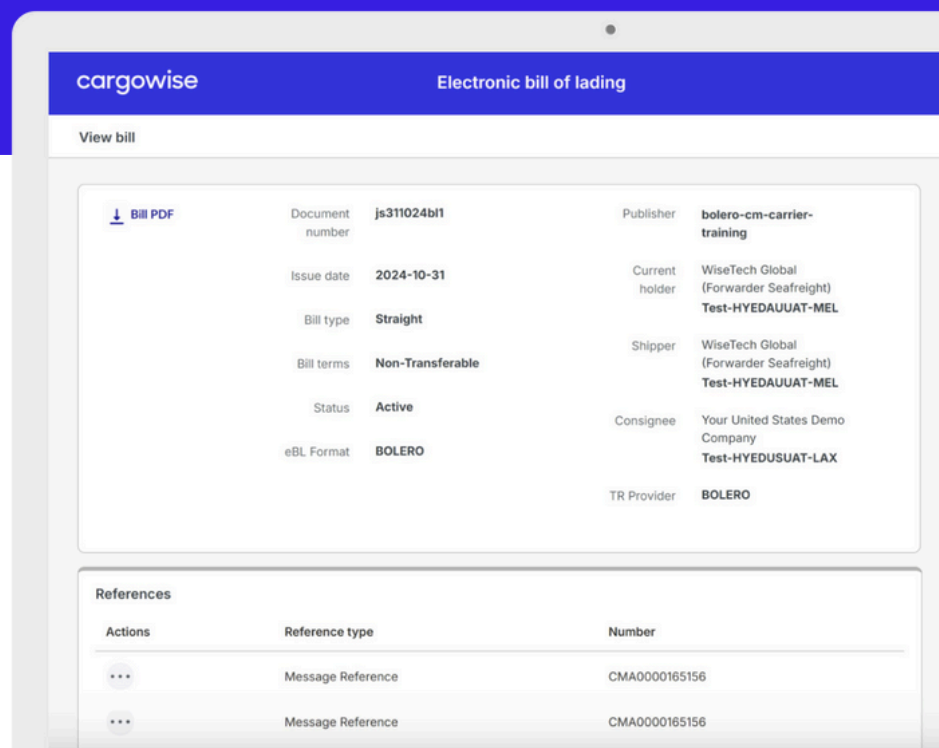

Switching to Electronic Bills of Lading (eBL) cuts out costly courier services and eliminates the risks of lost or damaged documents. With a fully digital process, you can prevent unwanted third parties from accessing sensitive information, significantly reducing the risk of fraud while improving control over your operations.

Benefit from enhanced security and seamless integration

CargoWise's native integration with Bolero ensures that your Electronic Bill of Lading transactions are encrypted, hashed, and fully secure. You'll have complete visibility into document ownership and transaction progress, with the ability to monitor every stage within CargoWise, making your operations safer and more efficient.

What's coming up?

The next phase of our eBL solution will allow you to **create and manage electronic house bills of lading** in CargoWise and send them electronically to your clients.

CARGOWISE NEXT

Manage your eBLs and all trade documents in one place.

Transmit bills of lading digitally

Request, receive, and manage electronic bills of lading directly within CargoWise. Whether handling carrier-issued or forwarder-issued bills, you'll have the ability to streamline the entire lifecycle of your trade documents – from issuance to surrender – across your supply chain.

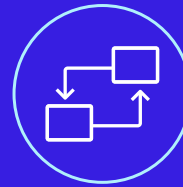

Real-time collaboration and visibility

Securely monitor transaction progress, track document ownership, and receive real-time updates throughout the supply chain lifecycle. This transparency enables faster decision-making and ensures smoother collaboration between you, your customers and your partners.

An integrated solution with Bolero

Manage bill of lading transactions effortlessly within the platform. You can request the electronic bill of lading from your ocean carriers in the electronic shipping instruction, receive the bill in CargoWise, track bill status in real time, view related events, and securely transact with confidence, all from one central location.

Reduce processing time to minutes

Enable your customers to receive and submit eBLs and documents to counterparties or financial institutions seamlessly. Streamline their applications for trade instruments like Letters of Credit, enabling efficient management of critical financial documents and secure trade financing with confidence.

Fully connected network with bank-grade security

Supported by dozens of international trade finance banks who trust the security protocols we have in place. Our eBL solution allows you to connect with your clients and extends the connection to their counterparts and banks, enabling the secure sharing of transactions and documents.

Global compliance and recognition

Approved by an international group of P&I clubs and supports both straight and negotiable bills, reducing the risks of delays, loss, and fraud. By collaborating with organizations like DCSA, ICC, SWIFT, BIMCO, and the FIT Alliance, we ensure that your eBL transactions are compliant with industry standards.
