

Ocean Carrier Contracts and Allocations

A comprehensive solution to manage your carrier contracts, allocations, and operational commitments with speed and precision.

Efficiently capture and manage ocean carrier contracts, along with committed cargo volumes over a specified period, in exchange for guaranteed capacity – all directly linked to rates, schedules, detention/demurrage free time, consolidations, containers, and bookings.

Provide your operators with real-time visibility into space utilization for each contract, enabling them to explore different scenarios using the allocation simulator to make informed decisions and fulfill their commitments.

Maximize revenue

Achieve optimal use of allocated capacity, reduce underutilized space, and improve your bottom line with smarter contract management.

Strengthen carrier relationships

By meeting carrier commitments, you can negotiate better rates, access premium space, and maintain strong, long-term relationships.

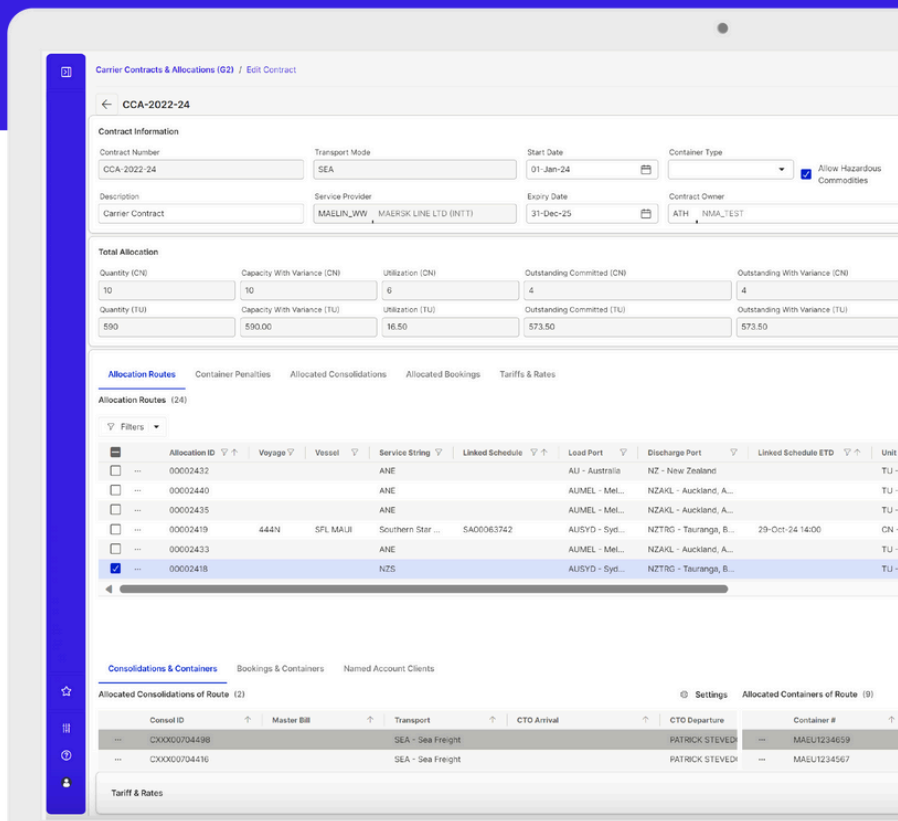

Make data-driven decisions

Leverage real-time insights to make better procurement decisions, optimize operations, and forecast capacity needs with confidence.

Mitigate risk and reduce cost

Avoid the costly penalties and operational risks that arise from underutilization, overbooking, or contract breaches by consistently meeting carrier commitments.

Provide your operators with **real-time visibility into space utilization for each contract**, enabling them to explore different scenarios using the allocation simulator to make informed decisions and fulfill their commitments.

Features

Contract management

Simplify the creation, management, and tracking of carrier contracts, routes, and trade lanes for better oversight of volume capacity, available schedules and booking eligibility.

Users can easily access all contract details, enabling better decision-making and supporting effective collaboration.

Capacity visibility

Benefit from a comprehensive view of allocated, used, and remaining capacity, which aids in effective planning and reporting.

This visibility enables proactive adjustments to resource allocation and helps prevent operational disruptions.

Automation tools

The Advanced Data Automation Wizard, and Allocation Route Wizard, simplify the creation of allocation routes, automating route generation and minimizing manual input.

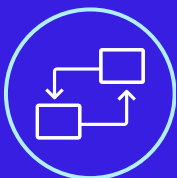

Synchronization with your existing jobs, gives operators instant access to updated information for effective contract management.

Container penalty configuration

Encourage adherence to agreements by configuring container penalties on a per-contract basis, fostering accountability and compliance.

By clearly defining penalties, users can mitigate risks associated with contract breaches, helping ensure all parties understand their commitments.

Automated matching

Automatically match consolidations, bookings, and containers to their respective contracts and routes, minimizing manual effort.

This automation reduces human error and helps ensure shipments comply with contractual commitments.

Simulator and forecasting dashboard

Unlock clear insights into capacity utilization and outstanding commitments, for enhanced contract transparency.

Empower users to visualize operations, predict future needs, and make informed adjustments for improved efficiency.
