

Automate your accounting compliance in the countries you operate in.

As more and more countries implement mandatory e-invoicing and compliance obligations, it can be hard to keep track of timelines and requirements.

With global e-invoicing capabilities integrated directly into CargoWise, you can issue compliant invoices across complex jurisdictions from a single platform.

Automated compliance

Streamline the reporting of financial documents to relevant authorities in approved formats and produce compliant invoice documents, where required, from within CargoWise after approval by the government authority.

Deep integration

Out-of-the-box functionality means you don't have to build your own local integrations to issue legally valid invoices.

Powerful single view

With all your e-invoicing capabilities centralized on a single platform, you won't need to move between systems, eliminating time spent on reconciliation or API-related errors.

How does it work?

Your users continue to post invoices as they always have done.

Cargowise takes care of the tax determination, transaction classification and actual communication of the electronic invoice messages between your system and the government electronic invoicing system.

When your invoices are validated, any important invoice presentation requirements are also covered as part of this end-to-end compliance solution.

As compliance documents are created, they are transferred from CargoWise to our central electronic invoicing platform, which is built on the foundation provided by the eHub messaging platform. From this centralized system, compliance electronic invoice messages are sent to the local government authority with all necessary encoding and secure exchange of messages.

Invoice

Integrated invoicing compliance

- ✓ Automated VAT determination
 - ✓ Invoice/transaction classification
 - ✓ Invoice presentation and compliance
- +

Integrated e-Reporting

- ✓ Authentication
- ✓ Encryption
- ✓ Invoice data validation and invoice signing
- ✓ Automated format conversion

Compliant invoice in your jurisdiction

- ✓ Automated format conversion
- ✓ QRcodes/barcodes/digital stamps
- ✓ Automated document processing

Updated financial document

Features

Data accuracy

Clear your invoices faster with digitized data sent directly to government agencies, eliminating time spent managing invoice errors and exceptions.

Data validation

Invoice data is validated as early as possible to avoid submitting invalid invoices to the government. Allowing you to fix errors and issue legally valid invoices early, avoiding delays caused by roundtrips to the government and back.

Security controls

Invoices are signed/encrypted to validate the identity of the invoice issuer and that the data is not tampered with during transmission.

Event automation

Event automation allows you to reconcile and identify any invoices that failed submission. You can also use these events as part of your Workflow Triggers to automatically deliver invoices only when they are stamped by the government.

Contact us today to see if e-invoicing is available in the countries you operate in so you can meet your global compliance obligations with ease. Learn more at cargowise.com/integrated-invoicing
