

# Expanded reproductive carrier screening for 600+ conditions

## Comprehensive tailored screening

- Horizon<sup>™</sup> offers screening for 600+ conditions with our carefully crafted panels

## Unmatched support for you and your patients

- Single and couple testing provided
- Joint reports provide reproductive risk for couples in which at least one individual is a carrier
- Pre-test genetic information sessions for all patients included
- Post-test genetic counselling sessions free of charge for carrier couples, including females with X-linked disorders

## Horizon<sup>™</sup> offers breadth and depth with comprehensive insights

**53**

X-linked conditions

**~99%**

detection rate for most conditions, including panel-wide copy number variant analysis

**3 - 4**

weeks to result\*

## How it works

### Step 1. Discuss Reproductive Carrier Screening

Discuss with your patient as recommended by clinical guidelines.

### Step 2. Request a Test

Order test using a dedicated Expanded reproductive carrier screen test request form. This can be downloaded from the Genomic Diagnostics website. Free of charge pre-test genetic information sessions with a genetic counsellor may be organised through: [my.natera.com/services/genetic\\_information](https://my.natera.com/services/genetic_information)

### Step 3. Patient pays for a Test

This test is not covered by Medicare or private health insurance. The patient visits the Genomic Diagnostics website to pay or call 1800 822 999. Record the receipt number on the request form.

### Step 4. Patient attends collection centre

The patient(s) attend a Healius Pathology network collection centre where the sample is collected and sent to the laboratory. The patient can attend any centre, any day of the week without making an appointment.

### Step 5. Results returned

The results will be returned to you by encrypted email. Please ensure to include your email details on the request form. The turn around time is 3 – 4 weeks from when the sample reaches the laboratory in the United States. Free of charge post-test genetic counselling sessions are available for all carrier and high-risk couples.
