

# INTERTEK INLIGHT GLOBAL INSIGHT. LOCAL EXPERTISE

**Inlight 2.0 was built to meet the needs of the ever changing complexity of the global supply chain, allowing for increased product advancements, evolutionary development, adaptive planning and continual improvement.**

## Supply Chain Challenges

The majority of organisations today are reliant on supply chains, however, they cannot guarantee the validity of their supply chain partners, nor can they guarantee the origins of the goods and services they rely upon.

In some instances, companies lack credible and verified information for up to 80 percent of their direct suppliers.

This lack of information impacts each organisation's ability to proactively manage risk, compliance, product traceability, ethical obligations and regulatory requirements.

If mismanaged, a compromised supply chain can result in: limited; delayed, or absence of stock; poor product quality; frustrated customers; negative insurance or regulatory outcomes; social or community backlash; and ultimately poor financial results that can threaten business.

## Our Solutions

Intertek Inlight provides the technology and expertise which enable organisations to better understand their supply chain risks and protect their brand.

The web-based platform incorporates Intertek's subject matter expertise and risk

assessment methodologies, which have been developed over a history of more than 20 years in supply chain risk and compliance auditing. This is supported by the benefits of a global and local network of offices and outsourced teams who speak the local language and understand the local market.

The platform enables organisations to map their supply chain, mitigate risks and bring visibility to their vendor partners. With the support of Inlight, customers can turn potential disruptions and compliance irregularities to their competitive advantage with captured market share and operational efficiencies.

**80% UP TO** Companies lack credible and verified information for up to 80 per cent of their direct suppliers.

## Inlight 2.0 Features

With enhanced analytical improvements, Inlight 2.0 was built to meet the needs of the ever changing complexity of the global supply chain, allowing for increased product advancements, evolutionary development, adaptive planning and continual improvement. Inlight includes new features and updates which allow users more flexibility and customisation to their unique supply chain programmes, including:

- Enhanced analytics giving our clients live dashboards of their suppliers' performances, trends, risks and opportunities.
- Wisetail™, an integrated dynamic online learning platform, allowing clients to drive training and learning based on corrective action plan outputs
- Helping suppliers to reduce audit and corrective action plan fatigue by introducing an automated mutual recognition process. It not only ensures speed to mitigate non-compliance risks, but saves the suppliers time and money to stay focused on corrective action implementation

For more information on the Intertek Inlight solution or to request a demo please speak to one of our Supply Chain Assurance team members.
