

THE POWER OF

REDARC

REDARC
MANAGER
ALPHA100

**MANAGER
ALPHA.**

POWER WITHOUT LIMITS.

MANAGER ALPHA.

POWER EVERYTHING, ANYWHERE, ALL AT ONCE

Delivers an unrivalled 100A charge. With this much power on tap you can charge your batteries faster than you can drain them no matter what you're powering.

COMPACT POWERHOUSE

The Manager Alpha range is up to 55% smaller and 28% lighter than comparable competitor systems, maximising your vehicle's capacity and leaving room for those adventure essentials.

BUILT TOUGH IN AUSTRALIA

Tested to the toughest vibration standards in the world (UL 458 & AS/NZS 60335) and made in Australia, so it won't let you down.

INSTANT INSIGHT

Stay informed and in control with RedVision. Up to 5 times more accurate than the leading competitors, you can trust that "5 hours left" means "5 hours left".

NEVER GET STRANDED

Excess solar power ensures your start battery remains charged, and with a simple button press, you can bring it back to life if it goes flat.

NEVER RUN OUT OF POWER.

Introducing the revolutionary three-way battery charger that redefines mobile power management.

Available in 50A, 75A and 100A capacities, it can charge more 3x faster than our previous generation Manager from a single source or a combination of your vehicle (DC), mains or shore power (AC) and solar simultaneously. This makes it an ideal companion whether you're driving, soaking up the sun at a remote camping spot, or at a caravan/RV park. With the Manager Alpha on-board, you'll always have enough power for your accessories, from your fridge to your air conditioner.

Included is the RedVision display, providing real-time charge and battery level information on the display and companion app via Bluetooth, allowing you to focus on your adventure and be confident that your power needs are taken care of.
