

REDARC EPDK FOR A TOW-PRO® INSTALLATION

The EPDK has been designed to fit in the Trailer Stop Lamp feed to support the installation of Tow-Pro Electric Brake Controllers on vehicles where 'back-feed' of 12 V (during Tow-Pro Manual Override) may interfere with the vehicle systems.

When installed correctly, the EPDK ensures correct Trailer braking and Stop Lamp operation when the vehicle brakes or the Tow-Pro Manual Override is used.

INSTALLATION – WITHOUT DEVICE

Use this installation for older vehicles not supplied with driver aids e.g. Cruise, Traction or Stability Control, Brake/Throttle Override.

INSTALLATION – WITH DEVICE

Use this installation for modern vehicles equipped with driver aids and Advanced Safety Systems e.g. Adaptive Cruise Control, Assisted Emergency Braking and Autonomous Emergency Braking.
